

SURVEY OF CONSTRUCTION INDUSTRIES

Final Report

2015

SURVEY OF CONSTRUCTION INDUSTRIES

FINAL REPORT

2015

DEPARTMENT OF CENSUS AND STATISTICS

MINISTRY OF NATIONAL POLICIES AND ECONOMIC AFFAIRS

PREFACE

In 1993, the Department of Census and Statistics (DCS) conducted its first Survey on Construction Industries at the request of Institute for Construction Training and Development (ICTAD). The output of the survey revealed that this survey to be continued for important economic and labour related indicators of construction sector in the country. Therefore, it became a regular a survey in the Department.

DCS has been conducting this survey annually with some exception where this was conducted biennially. This report is based on the 17th survey of construction industries and it gives data on input, output, labour engaged in the sector etc.; which are very important for economic policy makers as well as the construction industries itself.

Suggestions for improvement of this survey are most welcome.

Dr. A.J. Satharasinghe,

Director General,

Department of Census & Statistics.

No. 306/71,

Polduwa Road,

Battaramulla.

ACKNOWLEDGEMENT

The planning, collection and processing of data were done by the staff of Industry, Construction, Trade and Services Division under the overall guidance Mrs. U. Maheshwaran, Deputy Director and she was assisted by Mrs. B.G. Kumari Premalatha, Senior Statistician and Mrs. D.N. Munasinghe, Statistician.

The computer assisted data processing using the software package C Sharp was done by Mr. R.M.P. Dharmapriya, ICTA and the statistical tables were obtained using SPSS by Mr. Priyadarshana Dharmawardena, Senior Statistician. The computation and data processing were done by Mr. T.V.P. Shyaminda, Statistical Officer, Ms. W.T.K.T.P. Kularathne, Statistical Assistant and by Mr. P.A. Priyantha, Development Officer.

Data collection was done by the District Statistical Officers/ Statistical Assistants under the supervision of District Statisticians/ Deputy Directors. Follow up data collection was carried out by the staff of Industry, Construction, Trade and Services Division under the supervision of Senior Statisticians and Statisticians of the Division.

The Co-operation given by the respondents are also very much appreciated.

1. INTRODUCTION

BACKGROUND

Survey of Construction Industries was conducted in 1993 for the first time in Sri Lanka by the Department of Census and Statistics (DCS) at the request of the Institute for Construction Training and Development (ICTAD, presently Construction Industry Development Authority (CIDA)) with the objective of furnishing data regarding input, output and their trends of the construction sector in the country. DCS has continued conducting this survey to compile statistics related to the construction sector.

This Construction Survey (2015) is the 17th in the series of surveys the Department has conducted so far. But remarkable improvements have been made in this survey for example the construction activities listed at the listing stage of the Economic Census 2013/14 were also covered by a representative sample.

SCOPE AND COVERAGE

Scope of the survey is the economic activities on Construction sector which includes, construction of buildings, construction of roads and railways, construction of utility projects, dredging of waterways, demolition and site preparation, electrical, plumbing and other construction installation activities.

Along with the registered contractors in CIDA, the informal sector contractors also covered in the survey. The economic activities done by international contractors are not covered in this survey.

Until 2013, construction activities had been categorized according to the CIDA classification. But, in this survey the International Standards of Industrial Classifications (ISIC) Rev. 4 are used to classify the industries.

According to ISIC Rev.4, information related to the following types of the construction industries is collected.

1. General Construction
 - 1.1 Construction of residential buildings
 - 1.2 Construction of non-residential buildings

- 1.3 Construction of roads, railways, tunnels, air field runner ways, bridges etc.
- 1.4 Construction of utility projects
- 1.5 Construction of other civil engineering projects
- 2. Specialized Construction Activities
 - 2.1 Electrical wiring, plumbing, computer networks etc.
 - 2.2 Building completion & finishing
 - 2.3 Other constructions

METHODOLOGY

A total 573 establishments from the registered list of CIDA and 503 establishments from the new frame based on the Economic Census has been selected to represent the construction industries of the country. This survey of construction industries covered construction activities carried out in all the provinces during the reference year 2014.

According to the International Recommendation for Industrial Statistics (IRIS) 2008, National Account Value Added methodology has been used for this survey instead of the Census Value Added which was the practice in the past. Hence the questionnaire also was redesigned to collect the required data for the improvements.

Data related to the following are collected through the questionnaire.

- Value of contract
- Value of work done
- Value of raw materials consumed
- Salaries
- Fixed Capital Assets
- Expenditure for other Services
- Receipts for industrial and other services

For collecting data the questionnaires were sent to the establishments selected by post. Most of the construction industries had not responded to the postal request. At the second stage officers of DCS including the field staff were sent to the establishments directly to collect the information from contractors. Several visits had to be made for collecting data from the non-responding contractors.

FRAME

The industries which carried out construction activities in the year 2014 were taken from the list of contractors registered with the CIDA and the construction industries listed at the listing stage of the Economic Census 2013/14 were considered to prepare the frame of construction industries for this survey.

CONCEPTS AND DEFINITIONS

Reference period: Data collected for this survey is related to the construction activities carried out during the calendar year 2014 or financial year 2014 April to 2015 March.

Employment: This refers to the average number of persons engaged in construction activities during the reference period, including Working Proprietors/ Active Partners, Unpaid family workers, Skilled & Unskilled operatives, Administration/ Managerial, Technical/ Supervisory, Clerical and Related and all other paid workers.

Salaries & Wages: Amounts paid as Salaries, wages or sub-contract for the work done during the period.

Output: Value of the work done during the year 2014 (14/ 15 if financial year is given)

$$\text{Output} = \text{Value of work done}$$

Intermediate Consumption: Expenditure on goods (raw materials), other services and value of given sub-contract.

$$\text{Intermediate Consumption} = \text{Value of raw materials} + \text{Value of given sub-contract} + \text{Expenditure for other services}$$

Value Added: Value Added has been defined as the difference between the value of output and value of inputs.

$$\text{Value Added} = \text{Output} - \text{Intermediate Consumption}$$

Note: As new improvements were made in this round of survey, the findings may not be comparable with the those of previous rounds.

3. SURVEY RESULTS

The Survey of Construction Industries – 2014 reveals the following

- Total estimated value of work done by all type of construction activities in Sri Lanka was Rs. 397,770 million.
- The highest contribution to this value has been made by the Roads & Railways construction sector which is Rs. 192,559 million.
- This contributed to nearly half (48.4%) of the total value of work done during 2014.
- Building (Residential) construction sector was the second highest contributor to the total value of work done which is Rs. 52,078 million.

Table 3.1: Distribution of value of work done by type of construction activity -2015

Type of Construction Activity	Value of work done (Rs. Mn)	%
Buildings (Residential)	52,078	13.1
Non-residential Buildings	51,930	13.1
Roads & Railways	192,559	48.4
Utility Projects	37,049	9.3
Other Civil Engineering Projects	16,364	4.1
Electrical, Plumbing and Other Construction Installation Activities	20,667	5.2
Building Completion & Finishing	1,278	0.3
Other Construction	25,845	6.5
Total	397,770	100.0

Figure 3.1: Distribution of value of work done by type of construction activity -2015

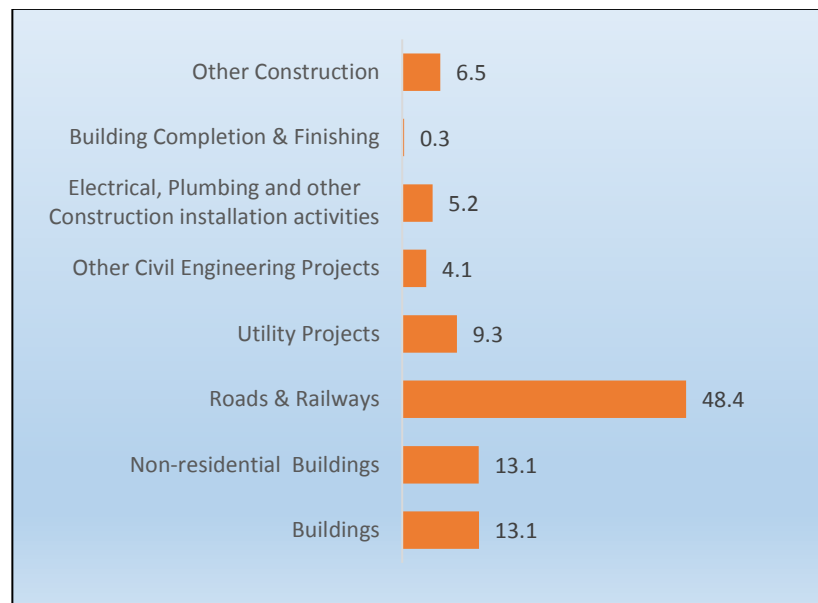

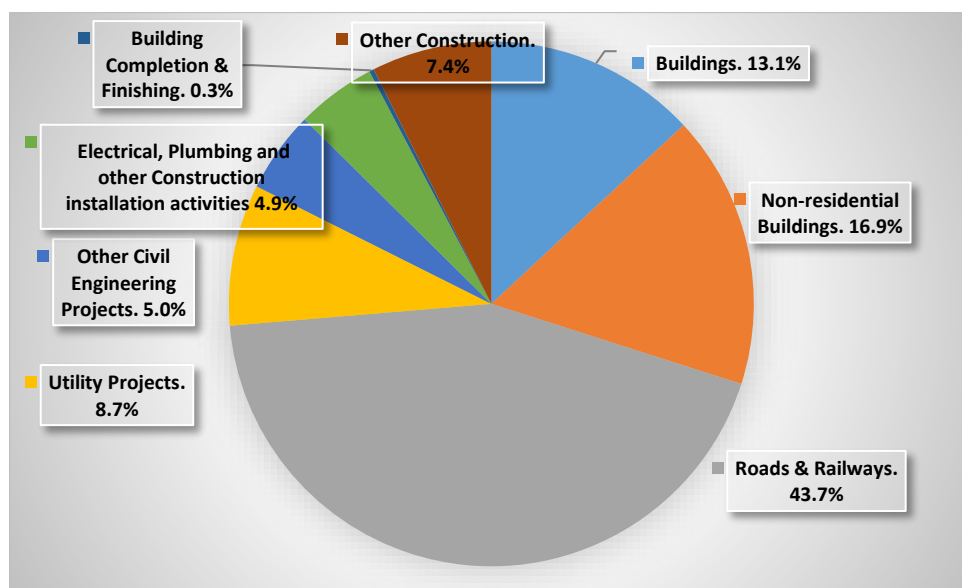

Figure 3.1 depicts that in 2014 the highest value of work done was recorded from Roads & Railways constructions. Non-residential building construction and Building construction activities have recorded 13.1%, 13.1% of the total work done during 2014.

Table 3.2: Distribution of raw materials consumed by type of construction activity - 2015

Type of Construction Activity	Value of Raw Materials Consumed (Rs. Mn)	%
Buildings (Residential)	28,880	13.1
Non-residential Buildings	37,234	16.9
Roads & Railways	96,579	43.7
Utility Projects	19,246	8.7
Other Civil Engineering Projects	11,069	5.0
Electrical, Plumbing and Other Construction Installation Activities	10,843	4.9
Building Completion & Finishing	643	0.3
Other Construction	16,342	7.4
Total	220,836	100.0

Total value of raw materials consumed by all type of construction activities in 2014, was Rs. 220,836 million.

Figure 3.2: Distribution of raw materials consumed by type of construction activity - 2015

If the consumption of raw materials by activity is considered the highest percentage (43.7%) of the raw materials consumed by Roads & Railways constructions activities in 2014.

Table 3.3: Distribution of some selected indicators of all construction activities and Roads & Railways construction - 2015

Indicator	All construction activities (Rs.Mn)	Roads & Railways Construction	Share of Roads & Railways constructions out of all activities (%)
Value of Contract	527,429	265,730	50.4
Value of Work Done	397,770	192,560	48.4
Value of Intermediate Consumption	260,154	114,024	43.8
Value Added	137,617	78,535	57.1
Raw Materials	220,836	96,579	43.7
Sub-contract	35,523	22,616	63.7
Salaries	27,250	4,131	15.2

Figure 3.3: Distribution of some selected indicators of all construction activities and Roads & Railways construction – 2015

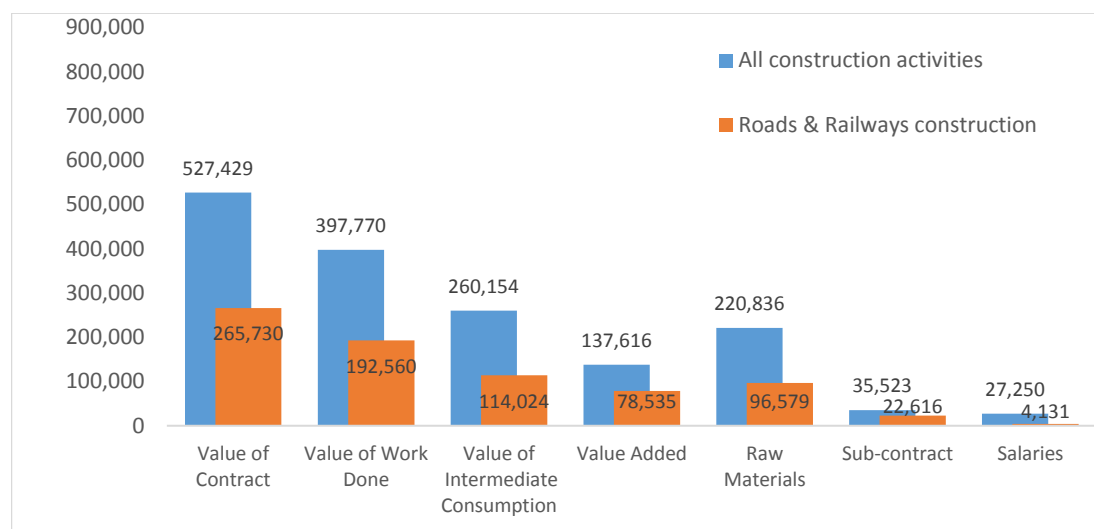

Figure 3.3 reveals that the share of indicators of Value of contract, Value Added, Sub-contract on Roads & Railways constructions were more than 50 percent out of the all activities.

Table 3.4: Distribution of value of sub-contracts by type of construction activity - 2015

Type of Construction Activity	Value of sub-contract (Rs. Mn)	%
Buildings (Residential)	6,781	19.1
Non-residential Buildings	3,370	9.5
Roads & Railways	22,616	63.7
Utility Projects	1,689	4.8
Other Civil Engineering Projects	233	0.7
Electrical, Plumbing and Other Construction Installation Activities	157	0.4
Building Completion & Finishing	13	0.0
Other Construction	664	1.9
Total	35,523	100.0

Figure 3.4: Distribution of value of sub-contracts by type of construction activity – 2015

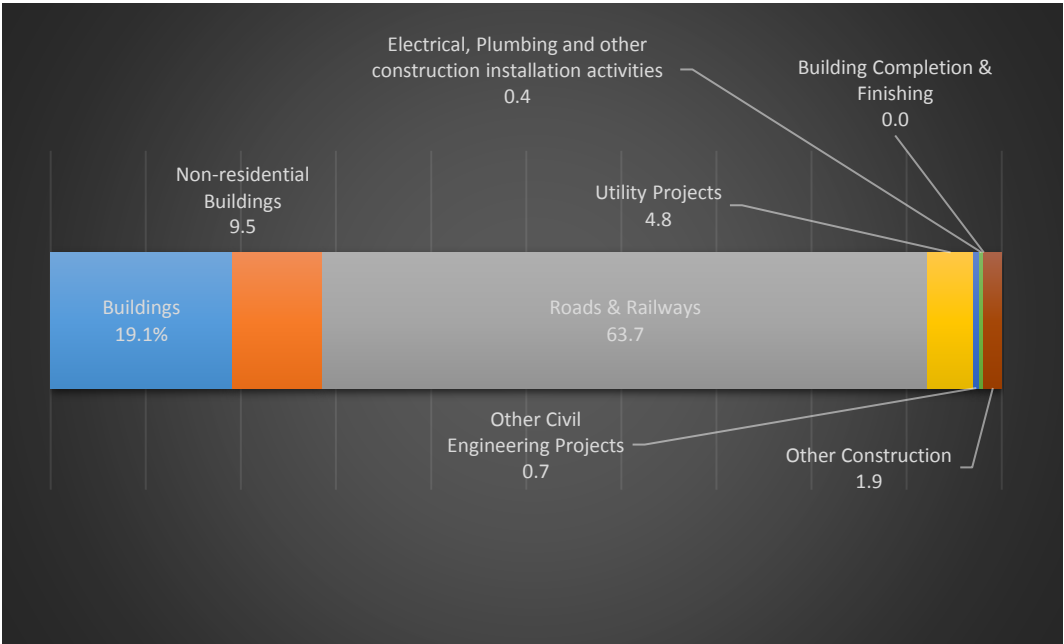

Figure 3.4 share that out of all the construction activities, Roads & Railways construction is the largest type with respect to the values of sub-contracts. It was 63.7 percent. The lowest share was recorded from the Building completion & finishing sector.

Table 3.5: Share of sub-contracts for the total work done by type of construction activity – 2015

Type of Construction Activity	Value of work done (Rs. Mn)	Value of sub-contract (Rs. Mn)	%
Buildings (Residential)	52,078	6,781	13.0
Non-residential Buildings	51,930	3,370	6.5
Roads & Railways	192,559	22,616	11.7
Utility Projects	37,049	1,689	4.6
Other Civil Engineering Projects	16,364	233	1.4
Electrical, Plumbing and Other Construction Installation Activities	20,667	157	0.8
Building Completion & Finishing	1,278	13	1.0
Other Construction	25,845	664	2.6
Total	397,770	35,523	8.9

Table 3.5 depicts that the share of sub-contracts for the value of work done for all the types of construction activities was 8.9 percent.

Figure 3.5: Share of sub-contracts for the total work done by type of construction activity – 2015

Considering the figure 3.5, it can be seen in the Building (Residential) construction sector reported the highest value of the share of sub-contracts out of value of work done. It was 13 percent. The lowest percentage was recorded from Electrical, Plumbing and Other construction Installation Activities, which is 0.8 percent.

4. STATISTICAL APPENDIX

Table 4.1: Some Selected Indicators of Construction Activities Classified by Type of Construction Activity - 2015

Type of Construction Activity	No. of Activities	Total Value of Contract (Rs.)	Value of Work Done (Rs.)	Intermediate Consumption (Rs.)	Value Added (Rs.)	Raw Materials Consumed (Rs.)	Value of sub-contract (Rs.)	Average No. of Employees	Wages & Salaries for Employees (Rs.)
Buildings (Residential)	955	57,289,833,886	52,078,209,741	36,474,705,445	15,603,504,296	28,879,577,497	6,781,347,678	17,290	4,636,664,921
